Research Interests and Activities

My research focuses on areas of observational cosmology, the formation and evolution of the most distant galaxies, and the growth of large scale structures of galaxies. This research includes the study of the growth of galaxies and supermassive blackholes within galaxies, and utilizes data from NASA’s space-based Great Observatories (Hubble, Spitzer, and Chandra), the NASA/ESA Herschel Space Observatory, and the largest terrestrial telescopes. As of July 2010, I am the author or co-author of more than 100 peer-reviewed publications, which have been cited more than 8500 times.
